

Instructions for Drum Simulator 2000

Have you always dreamed of being a Rockstar? Maybe you had a garage band long ago and want to relive the past? Or maybe you're like me, who just likes banging on things? Well, you've come to the right place!

Getting Started:

Before you can use the drum-application, you must open the source code in a code-editor of your choice. One that works with Java preferably, ("Eclipse" used in this example).

How to play:

- Press the "Run"-button (that looks like a play-button) to initiate the application.
- A new window will appear with a picture of a drum set and the title: "Drum Simulator 2000"
- Each part of the drum set has a key or letter assigned to it. These keys represent sounds matching that specific part of the drum set.
- By pressing each corresponding key on your own computer keyboard, you will get different sounds matching that of the drum set.
- Once you're done and finished playing, just press the "X"-mark in the corner of the "Drum Simulator"-window and it closes the application.

And that's it!

Now it's up to you to follow your dreams and become the ultimate drummer.

Thanks for playing!
